

Does New York City's Planning Reflect its Disparities?

An Analysis of NYC Socioeconomic and Public Infrastructure Data

Which Community Districts in NYC Are The Most Underserved?

Distribution of Median Income

Total Facilities by 2023 Median Income

How Do Public Facilities in The Highest Index CDs Compare to The Lowest Index CDs?

How Have These Trends Changed Over Time?

Cumulative Funding of CD Groups For Parks and Recreation From 2006 - 2025

Cumulative Count of Parks and Recreation Across CD Groups From 2006 - 2025

Summary

From the data gathered, it is clear that there is a substantial difference in public infrastructure between the top five index community districts (CDs) and bottom five index CDs. Both the count and funding of the bottom five's public infrastructure fall behind the middle and top five. This gap has only widened over time since 2006, and based on current capital project funding, it seems this gap will continue to widen in the foreseeable future.

To fully understand community well-being, future work must look beyond publicly owned assets. Analyzing the distribution of vital non-public infrastructure, such as grocery stores, local clinics, and private recreational centers, could yield interesting results that add further depth to this analysis. This dashboard mainly uses count and funding as metrics, but accessibility, sentiment, and capacity metrics may provide more in depth data.
